

## Individual-level Outcomes

The following table summarizes the results from Question 15 of the annual evaluation survey: *“If your project strategies include interventions directed toward individuals, which outcomes, if any, are you collecting data on?” (Check all that apply.)* This information may be helpful to you as you plan and implement your local evaluations.

**\*\*Keep in mind that this survey was done in mid-2016, when some grantees were still in the planning process; these results would likely look different now.**

Indicator	A2QC (%)	TiP (%)	HC (%)
Access to care (e.g. # uninsured enrolled in plan/program; # uninsured with medical home; #/% accessing needed community resources/supports)	100	50	10
Identification of other sources of support for those who need services not covered by insurance	100	63	10
Timeliness of assessing and mobilizing supports for medically vulnerable persons	33	25	0
Unnecessary hospitalizations/long-term care placements	33	13	0
Access to financial, insurance, and legal information	67	50	10
No-show rates (e.g. among uninsured)	67	0	10
Management of medications	67	38	10
Participant perception of self-management skills	0	0	10
Chronic condition self-management	0	25	10
Training reaches key partners and community members	33	25	30
Enrollment/retention in new programs	67	25	10
Individual/caregiver satisfaction	67	38	0
Independence	0	25	10
Sense of safety	0	25	20
Social isolation or community connectedness	0	50	70
Health status/ functional capacity	67	50	30
Other (specify)	0	38 (collecting data on calls to TiP number)	30 (no specific comments)
